AI-Powered Learning Transformation & Workforce Enablement

EXECUTIVE SUMMARY

Designed and developed a proprietary AI-powered learning strategy that transformed the instructional design lifecycle by integrating Generative AI into analysis, instructional design, content development, workflow automation, and learning evaluation.

By combining instructional design expertise with advanced AI capabilities, developed a scalable approach at **CertiVend, LLC**, that accelerated course development, strengthened workforce readiness, and modernized learning operations.

SEER FRAMEWORK

3 minute video snapshot. Throughout my career, I've combined visionary thinking with practical execution to help organizations prepare for the future. By anticipating workforce needs, leveraging emerging technologies, and designing scalable learning ecosystems, I align workforce development with business strategy.

This philosophy inspired me to create the **SEER Framework**—a business-focused methodology built on **Strategy, Execution, Enablement, and Results**. SEER transforms business objectives into workforce capability, equips employees with the knowledge and support to succeed, and measures business impact.

SEER PHASE	DETAILS	
STRATEGIC	Decide plans by defining the future. Developed a future-focused learning strategy that positioned Generative AI as a strategic capability for workforce transformation. Strategic Activities - AI learning strategy - Competency development strategy - Future workforce capability planning - Learning strategy - Performance improvement strategy - Transformation strategy - Workforce development strategy	
EXECUTION	Design workforce using tactics. (Knowledge, Skills, Attitude, Behavior) <u>Designed an AI-enabled learning architecture (DRIVER)</u> that translated complex operational workflows into competency-based learning experiences. Applied AI to analyze learning requirements, identify performance gaps, map competencies, and develop role-based learning programs aligned with workforce capability. Knowledge - Business processes - Learning methodologies - Operational workflows - Workforce capability Skills - AI-assisted content development - Competency mapping - Instructional design - Learning design - Problem solving - Workflow analysis Attitudes - Adaptability - Continuous learning - Innovation	

SEER PHASE	DETAILS	
	- Quality mindset Behaviors - Continuous improvement - Data-informed decision making - Scalable content development Execution Activities - AI-assisted instructional design - Competency analysis - Curriculum development - Knowledge architecture - Learning architecture - Role-based learning design	
ENABLEMENT	Develop resources to prepare people for success. (Deliverables, resources and tools) Designed multimedia learning assets that accelerated development while supporting workforce capability. Deliverables, Resources & Tools Enterprise Learning Deliverables - Action planning tools - AI-generated podcast episodes - Bloom's Taxonomy-aligned learning objectives - Instructional videos - Learning journal - Podcast transcripts - Scenario-based capstone challenge - Scenario-based knowledge checks AI-Enabled Business Applications Analysis - Learning requirement analysis - Performance gap analysis - Task summarization - Workflow analysis Design - Competency framework development - Curriculum design - Role-based learning - Learning ecosystem design Development - Content development - Graphic creation - Multimedia production - Quality assurance - Voiceover scripts Implementation - AI workflow automation - Learning operations - Process automation Evaluation - AI-assisted reporting - Data-driven insights - Learning analytics - Performance consulting AI Platforms & Technologies - Canva - ChatGPT - Claude - Gemini AI Studio Pro - Gemini NotebookLM - Microsoft Copilot - Otter Pro	
RESULTS	Evaluate the data to measure the business impact. The AI-assisted instructional design methodology significantly accelerated the development lifecycle while producing comprehensive, enterprise-ready learning solutions. Business Outcomes	

SEER PHASE	DETAILS
	• Reduced development time for a two-hour instructor-led or eLearning program from the traditional industry average of 70–130 hours to approximately 16 hours using proprietary AI-powered instructional design workflows. • Achieved an estimated 75–85% reduction in development time compared with traditional instructional design approaches. • Produced complete learning ecosystems that integrated instructional content, multimedia, assessments, learner reflection tools, and action planning resources through AI-enabled workflows. • Leveraged AI to accelerate analysis, instructional design, multimedia production, workflow automation, and learning evaluation while maintaining instructional integrity.
